

# M-Files® EAM

## Enterprise Asset Management

M-Files is a collaborative platform and centralized repository for all technical data on equipment and suppliers. In M-Files, you can solve the whole range of tasks for managing the maintenance and repairs of equipment and other enterprise assets, as well as managing basic data.

# 5

## REASONS TO CHOOSE M-FILES

- Easy to learn and operate, familiar interface as in Windows Explorer
- Comprehensive business information management system
- Conformity with international information management standards
- Universal tool for integration with other business applications
- Capability for administration and modification of the platform by customers on their own

### MAINTENANCE ORGANIZATION CHALLENGES

- Maintenance services do not have access to regulatory and reference information
- Production site data are missing or inaccurate
- Technical specifications and drawings are not available
- Irrelevant and scattered technical data on equipment

### PROBLEM SOLVING WITH M-FILES

- Organization of technical support in proactive mode
- Unified system for collecting and storing data on equipment, fixed assets, material and technical resources
- Connecting all production sites
- Automation of planning and control of scheduled preventive and repair work

FTS Group is an official partner and premier reseller of M-Files solutions for information and document management.
